Bachelor of Mathematics (Computer Science) — University of Waterloo, Class of 2020

Experience

Cruise — *Autonomous Vehicle Engineering*   *Sept 2019 — Dec 2019*

- Working with the perception team to improve autonomous driving

Huawei Technologies — *Software Developer*   *Jan 2019 — Apr 2019*

- Worked on a distributed training framework for machine learning
- Increased model accuracy by designing and implementing a method to ensure the data shared between nodes during training is accurate and consistent
- Wrote scripts to report code performance statistics and identified potential code optimizations through extensive testing and profiling
- Researched techniques to improve model accuracy on distributed and single node systems

Aecon Research Team — *Software Developer*   *May 2018 — Aug 2018*

- Led the development of tools and features to allow the integration of digital verification of construction components in fabrication plants
- Implemented and documented a new verification process technique for the alignment of construction pipes which will be included in a civil engineering journal article
- Increased application responsiveness by offloading CPU heavy operations to separate threads

Rocscience — *Software Developer*   *Sept 2017 — Dec 2017*

- Designed comprehensive data display tools using Microsoft's Foundation Class Library
- Implemented 2D and 3D models of structure foundations and materials using the OpenGL API
- Built a tool to generate customizable reports on geological models using Microsoft's Graphics Display Interface and HTML

Tangam Systems — *Software Developer*   *Jan 2017 — Apr 2017*

- Collected client browser information and metrics to evaluate the continued support for legacy browsers using C# and VBA
- Advanced current roadmap initiatives such as mobile notifications and team performance statistics by developing and maintaining ASP.NET MVC web applications

Projects

Compiler — *Course Project*   *Mar 2018*

- Wrote a compiler in C++ to compile a subset of C into MIPS assembly code

Recipe-Builder — *Hack The Valley*   *Jan 2017*

- Created an Alexa app to recommend recipes based on ingredients provided by the user, utilizing Amazon's Alexa Skills Kit
- Added the application's voice commands and response phrases to Alexa in JavaScript

Skills

Languages: C++, C, C#, Java, Bash, Python, HTML/CSS, Racket

Technologies: Git, SVN, Visual Studio, MFC, OpenGL, VTK, JIRA,
